

Mapping For Success & Laser Focus

Focus For Success Boosters

- Use the 3 r's to make sure you know exactly what needs to be done in order to deliver your work with consistently high quality. **Receive** the task requirements clearly, if unclear, ask any necessary clarifying questions. Then **review** the time, information and man power resources at your disposition. Lastly, **respond** with action in what you deem to be the best possible manner given the task and the review of the landscape.
- Once of the best ways to improve your focus is to dedicate some time towards meditation. This helps you to learn how to focus on one thing (i.e. the breath or body sensations) for a prolonged period. You will be amazed how the benefits of this can cross over into your work and an ability to remain undistracted longer.
- Allow yourself the occasional reward e.g. you hit a milestone on your big goal and you treat yourself to a lovely latté from your local café and enjoy it mindfully and peacefully.
